Experiment 7: Integrating a Zoho Creator Application with Zoho CRM Using Connections and APIs

SIVARATHINAM S

ROLL NO: 241401102

Aim

To integrate the "Gym Membership Enrollment & Front Desk Management" application with Zoho CRM using a connection, so that every new enrollment is automatically created as a Lead in Zoho CRM.

Application Details

- **Application Name:** Gym Membership Enrollment & Front Desk Management
- **Form:** Membership_Enrollment_Form
- **Integrated Service:** Zoho CRM (Leads module)
- **Integration Method:** Zoho CRM integration action using an authorized connection
- **Trigger:** Create, On Successful Form Submission

Concepts Used

Concept	Description
Connection	An authorized link between Zoho Creator and Zoho CRM that uses OAuth, so Creator can access CRM data on the user's behalf
Integration action	A workflow action that pushes submitted form data to another service through its API
Zoho CRM API	The CRM service that receives the data and creates the Lead record
Field mapping	Matching each CRM field with the corresponding form field

Procedure

1. Set up a Zoho CRM organization ("fitness gym") and verified that the Leads module works by adding a test lead manually.
2. In Zoho Creator, opened Workflow, Form Workflows, New Workflow for Membership_Enrollment_Form.
3. Selected the event Create, Successful form submission and named the workflow CRM CONNECT.
4. Added a new action with the condition **Always** and the action type **Integrations**.
5. Selected **Zoho CRM, Create Lead**, then created and authorized a new Zoho CRM connection.
6. Mapped the form fields to the CRM Lead fields (see the table below) and saved the workflow.
7. Submitted a test enrollment through the live form.
8. Opened Zoho CRM, Leads, All Leads, and verified that the new lead was created.

241401102

Field Mapping

Zoho CRM Lead Field	Membership_Enrollment_Form Field
Company	Membership Type
First Name	First Name (Member_Name)
Last Name	Last Name (Member_Name)
Email	Email_address
Phone	Contact_Number
Description	Membership Plan

Equivalent Deluge Script

The same integration can also be written in Deluge using the CRM integration task. This was documented as an alternative to the no-code integration action.

```
leadMap = Map();
leadMap.put("First_Name", input.Member_Name.first_name);
leadMap.put("Last_Name", input.Member_Name.last_name);
leadMap.put("Email", input.Email_address);
leadMap.put("Phone", input.Contact_Number.toString());
leadMap.put("Company", input.Membership_Type);
leadMap.put("Description", "Plan: " + input.Membership_Plan + ", Activities: " +
input.Preferred_activities.toString());

response = zoho.crm.createRecord("Leads", leadMap, Map(),
"your_connection_link_name");
info response;
```

Testing

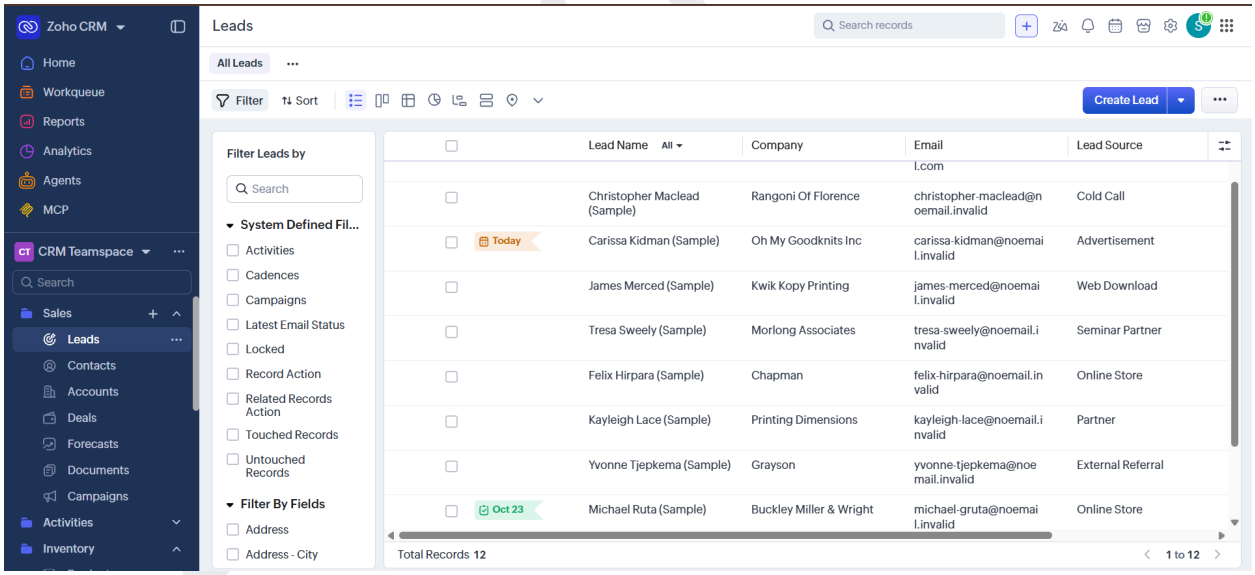

Test Case	Input	Expected Result	Actual Result
Connection status	Authorize Zoho CRM connection	Status shows Connected	Passed
New enrollment	Valid record submitted in the form	Lead created in Zoho CRM	Passed
Data accuracy	Compare the CRM lead with the form record	Name, email, phone and description match	Passed

Issues Faced and Fixes

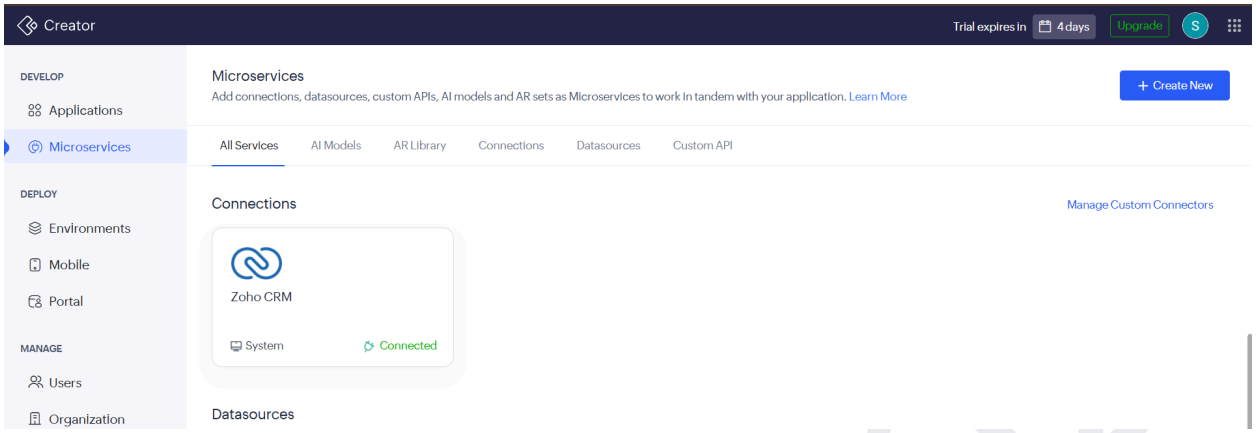

S.No	Issue	Cause	Fix
1	Lead Status mapped to Membership Plan	Lead Status accepts only fixed values such as Not Contacted	Removed the row and mapped Description instead
2	Company mapped to First Name	Company is mandatory in CRM, so a placeholder was used	Mapped Company to Membership Type and added a separate First Name row
3	Zoho CRM asked to create an organization	No CRM organization existed when the connection was first authorized	Created the organization and re-created the connection
4	No lead visible in CRM	Connection created before the CRM was set up, and the lead list showed sample data	Deleted the old workflow, rebuilt the connection and workflow, and set the Leads view to All Leads

Screenshots

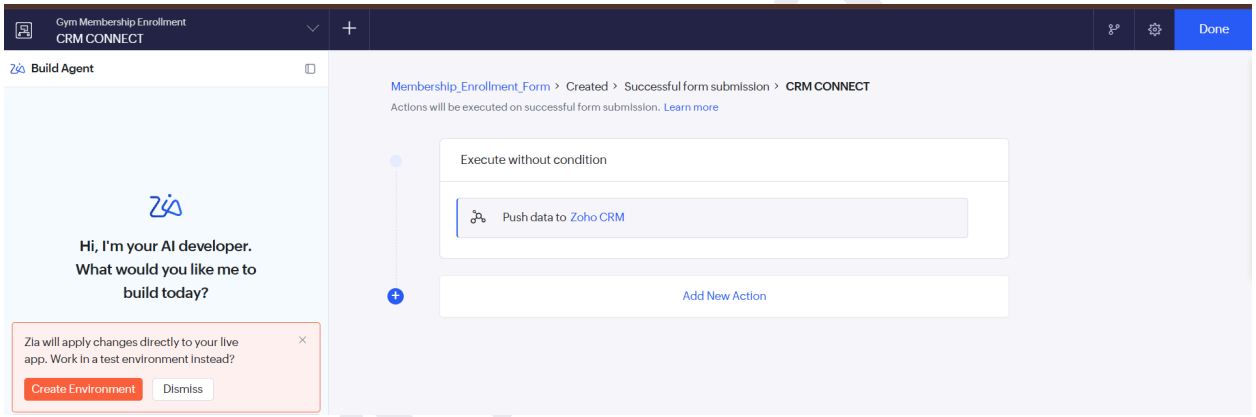

1. Zoho CRM organization with the Leads module

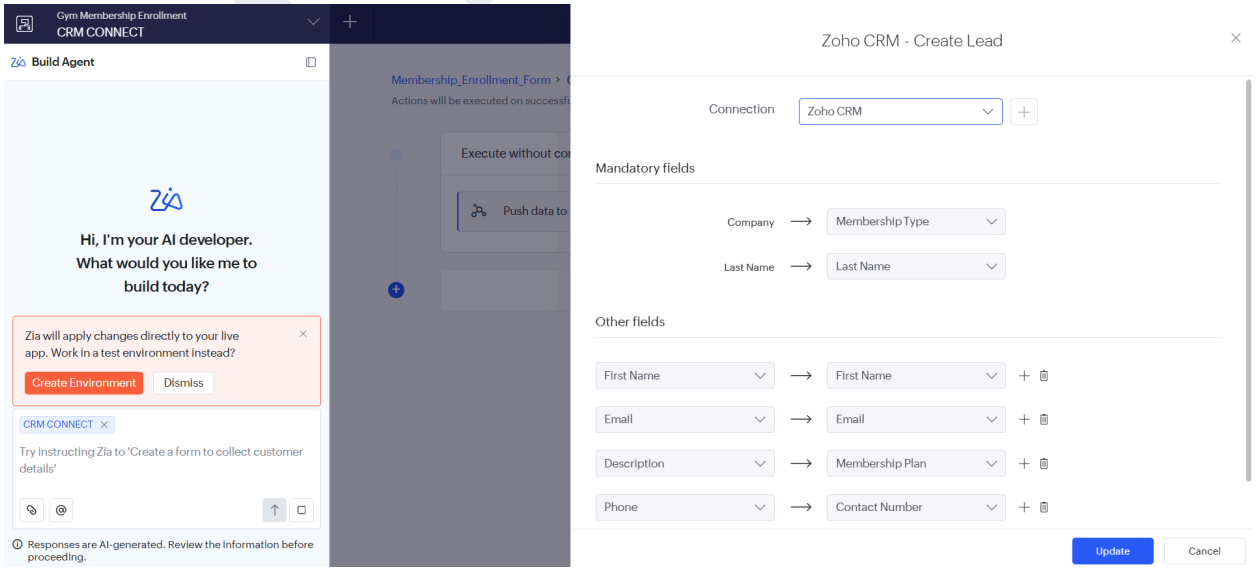

2. Zoho CRM connection showing Connected

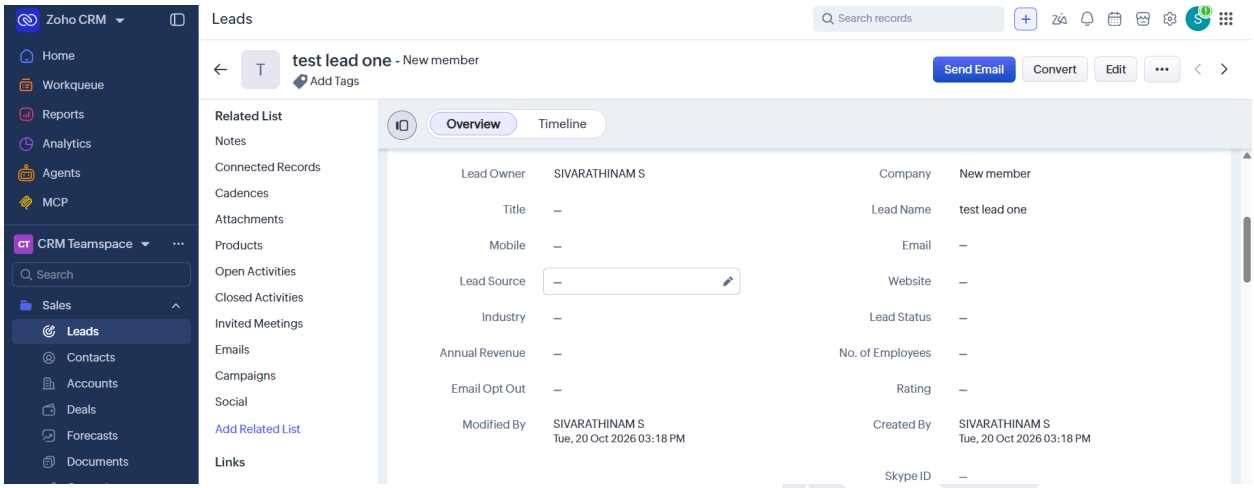

3. CRM CONNECT workflow in Form Workflows

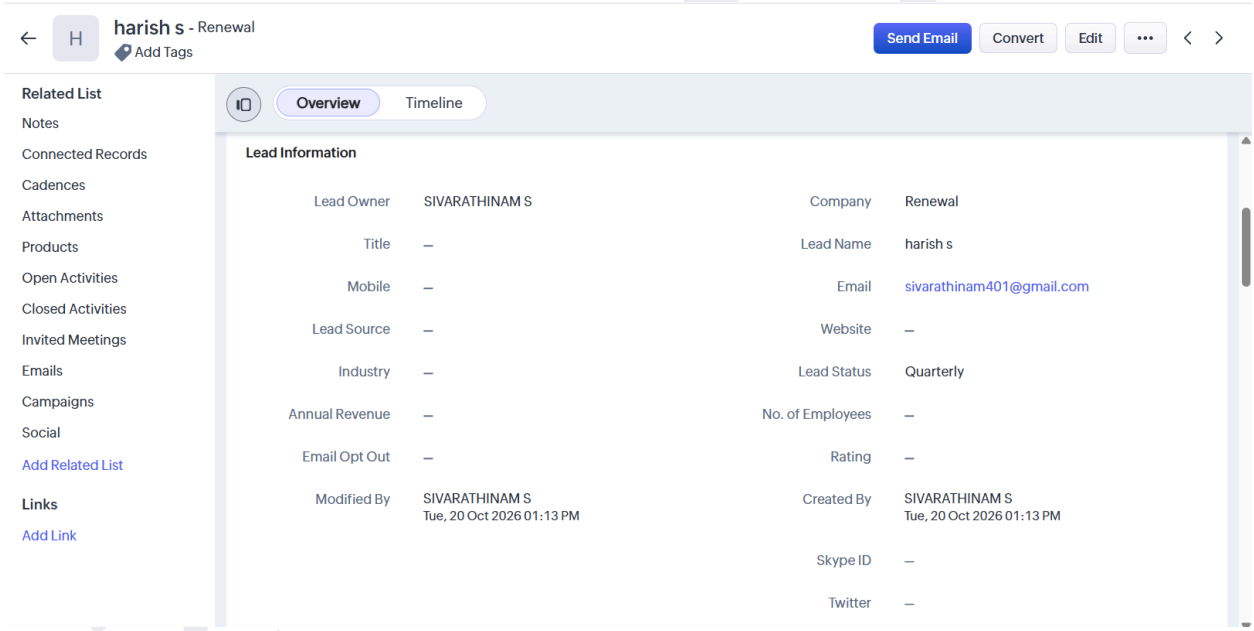

4. Create Lead field mapping

5. Test submission in the form and report

6. New lead in Zoho CRM

Result

The Gym Membership Enrollment application was integrated with Zoho CRM using an authorized connection and an integration action. Each new enrollment is now automatically created as a Lead in Zoho CRM, which was verified with a test submission.
